

# WWARN Informatics

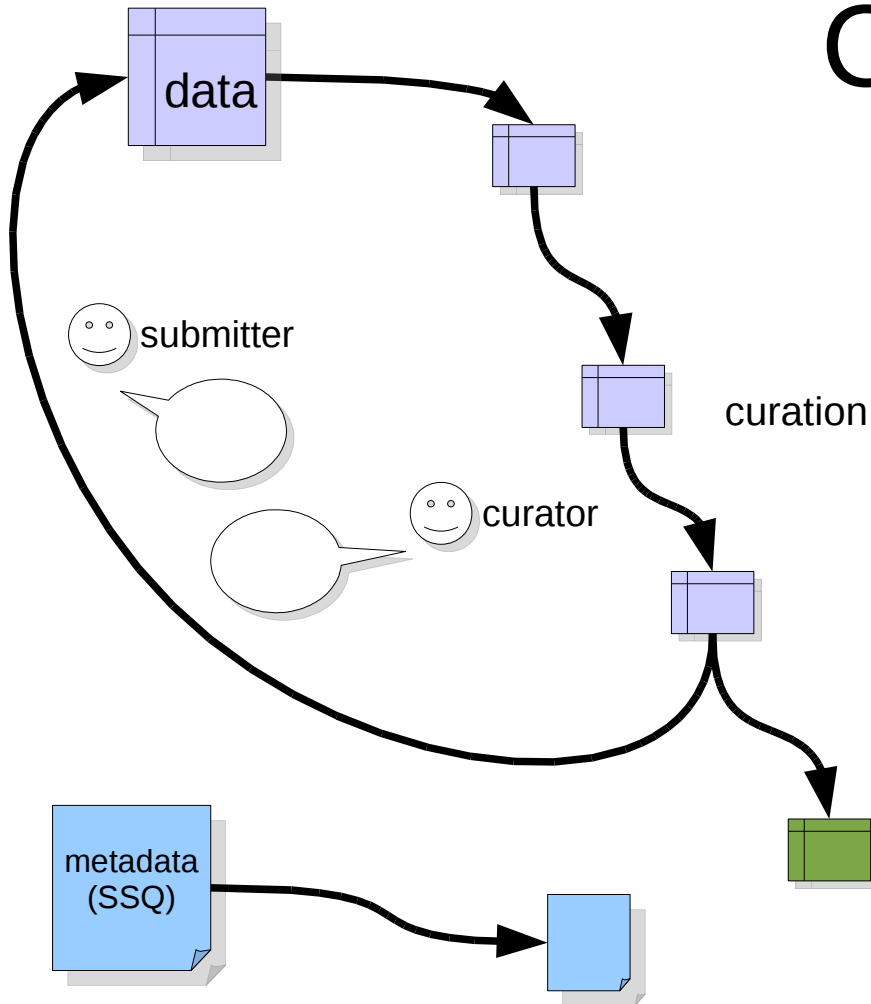

## Overview & Roadmap

- data could be submitted in any format
- enable submitter to view standard analyses & reports for their study
- enable analysis of data across studies
- need to **curate the data** ...

# Curation

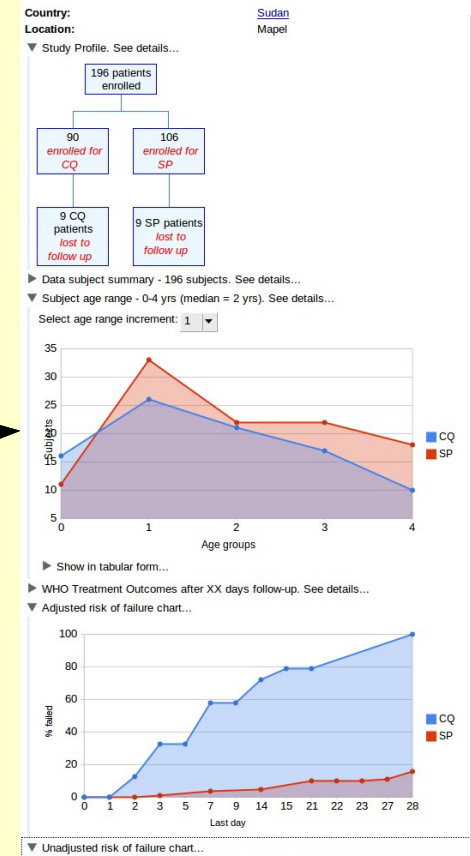

- standard analyses & reports need standardised data
- curation means, at least, transforming data into standard...
  - e.g., reviewing, renaming, removing, transforming, mapping, ..., variables (data structure)
  - e.g., reviewing, validating, removing, transforming, mapping, calculating, ..., data values (data content)

## Chassis/WWARN

- system for **data management** = submission + curation of data & metadata

## The WWARN Application

- system for analysing, visualising and reporting curated data

# Chassis/WWARN Design Goals

- Used by submitters & curators
- Enables upload of data in any format
- Provides framework for curation
- Captures complete audit trail
- Manage privacy
- Manage quality
- Integrate data across modules (clinical, pk, in vitro, molecular)

# The WWARN Application

- Enables visualisation, analysis & reporting for curated data
  - Used by submitters
  - Used by other researchers, public health officials, ...
- 
- Add value for submitters
  - Add value for everyone else

# Roadmap

- **Feedback from community is vital (esp. from TAG)**
- Release first production quality version of Chassis/WWARN & The WWARN Application, **ASAP** (ideally early 2010)
- First release - limited functionality
- Add more functionality **incrementally**, in subsequent releases, **based on feedback**
